ABOUT US

Motorcycling and motorcycle garments are our passion

Halvarssons was established in **Malung**, a little town in the backcountry of **Sweden** where since the mid-1940's, the finest Scandinavian motorcycle garments have been made.

This tradition continues to live on in Halvarssons. Based on a firm foundation of craftsmanship, passion for detail and the highest level of protection, Halvarssons has always continued to develop its leather and textile motorcycle garments using only the finest quality materials and features to accommodate and protect You.

We're born with the well-known **Swedish conscience**, "to care" in our blood. It is therefore obvious to us to aim for the best and to always do what's right. **We care** at Halvarssons. We care about each other and our environment. We care about our friends who make the garments and about how they're made. We care about our dealers and most of all we care about **You**.

The **WE CARE** mentality in our company and in our work is present at every level. From design to production and all the way to You.

The exceptionally strong loyalty, from You, our riders, is the best proof that we do things right.

**WE
CARE**

DESIGN PHILOSOPHY

SAFETY THROUGH COMFORT

has been our design philosophy throughout Halvarssons history. The more comfortable the garments are, the better you can focus on what matters.

We constantly develop our materials and technical features to be able to offer the best possible solutions for you, no matter the terrain or the conditions.

RIGHT MATERIALS

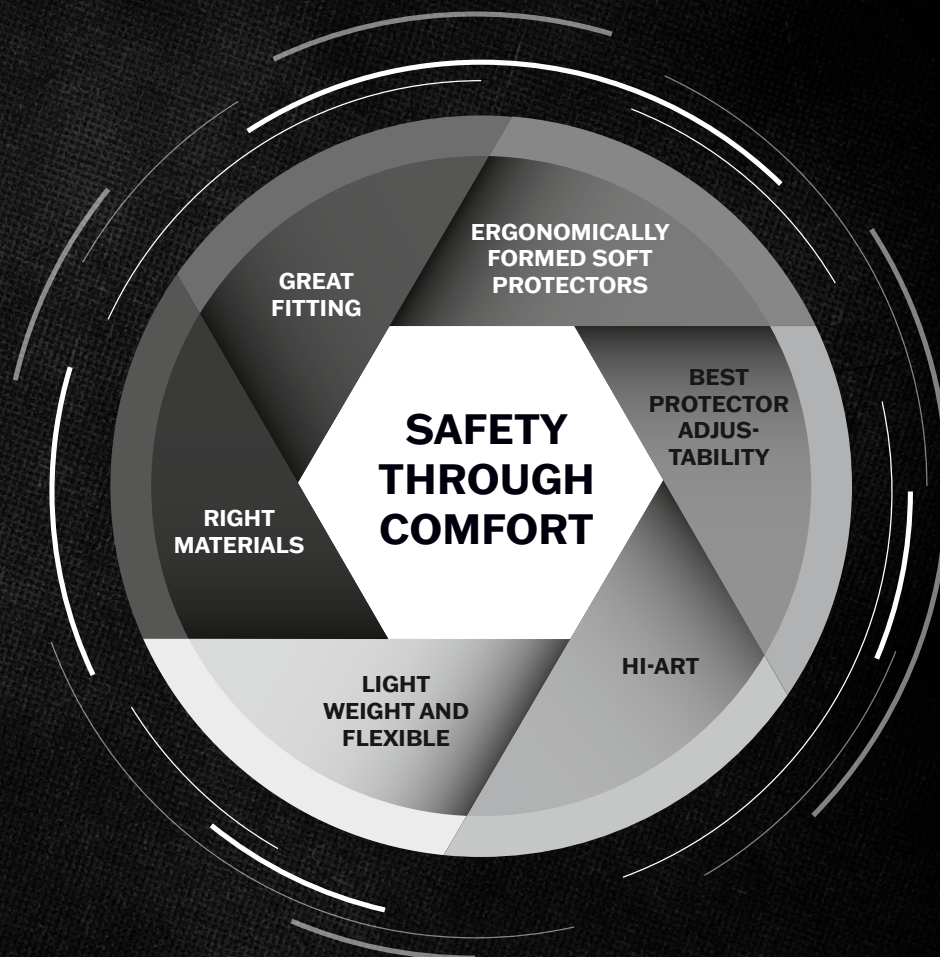

Outer materials are strong and durable, but also soft and supple to maximise safety and comfort. Each of our technologies is rigorously tested and selected to suit our products.

GREAT FITTING

We can honestly say that our clothes have probably the best fit on the market! Our goal is always to produce gear that is exceptionally comfortable to wear and equally safe to ride in.

ERGONOMICALLY FORMED SOFT PROTECTORS

Ergonomically formed protectors are very comfortable to use. They are made of light material and include air holes for ventilation that makes them breathable and comfortable.

BEST PROTECTOR ADJUSTABILITY

All our protectors have stepless adjustability that means everyone can find the perfect position for them. All protectors are compatible with all of our riding products.

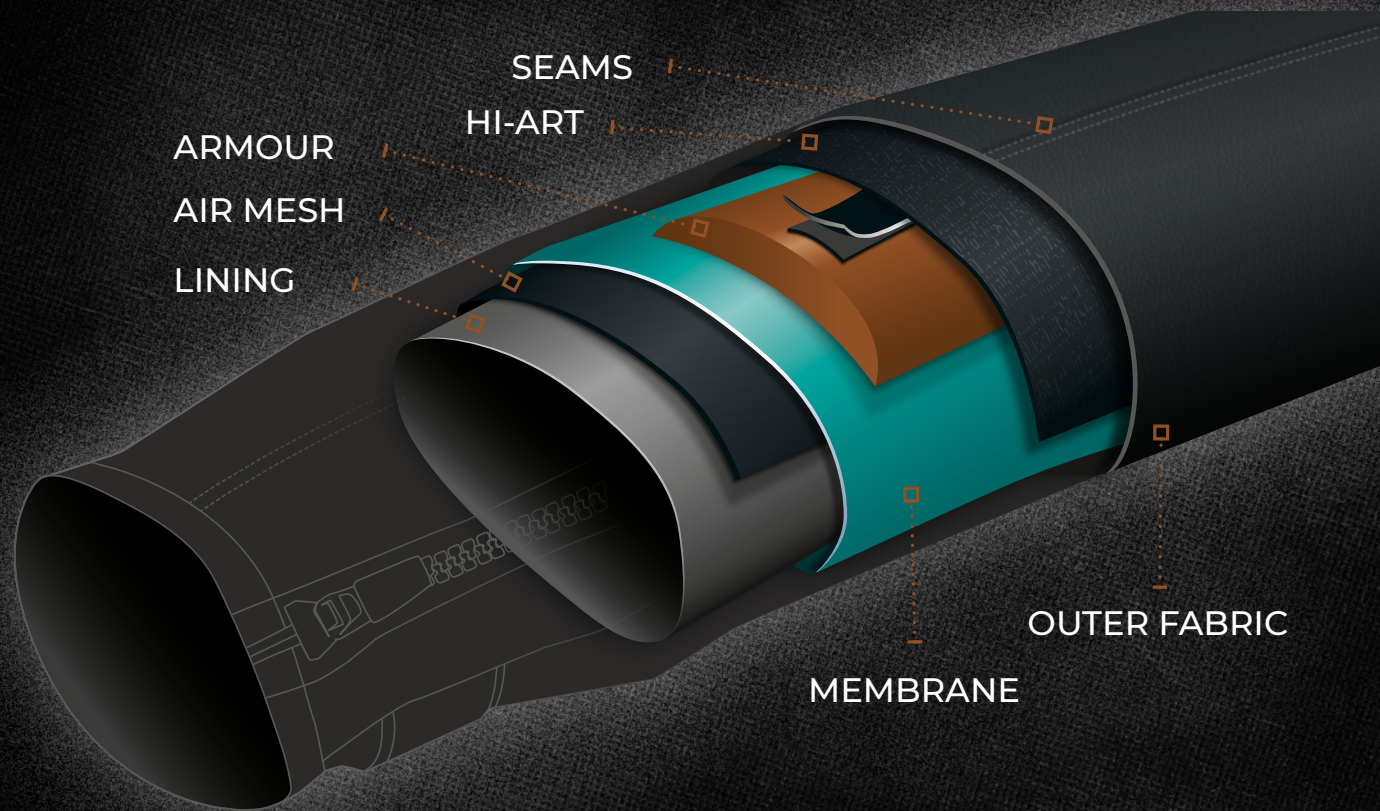

HI-ART

HI-ART® is our proprietary material that makes garments resistant to abrasion and we use the material in especially exposed areas. It makes textiles no less than 500 % stronger and leather 200 % stronger.

LIGHT WEIGHT AND FLEXIBLE

Our goal is always to produce gear that is exceptionally comfortable to wear and equally safe to ride in so that you can always focus on what matters – riding!

BENEATH THE SURFACE

SEAMS

We choose thread to suit the material to make seams as strong as possible. We use Triple Stitch in vulnerable areas of our leather wear.

OUTER FABRIC

The outer fabric is leather or textile with various types of surface treatment.

HI-ART

Our proprietary material makes garments incredibly resistant to wear, and is used in most of our products. The picture above shows where HI-ART is located in our garments.

ARMOUR

Garments that use armour have Velcro sewn into them to keep the armour in place and for ease of adjustment.

MEMBRANE

Some garments have a laminated, drop-liner or removable membrane. Taped seams, naturally.

AIR MESH

We often use Air Mesh behind armour for better comfort.

LINING

Closest to the body is a lining, sewn-in or removable. It is usually made from ventilated mesh, temperature-regulating Outlast® or a warm, quilted lining.

WE ARE READY

Motorcyclist personal protection comes under the legislation of the EU Regulation 2016/425. This means that all products that are intended to protect the user from one or another hazard must be tested, by an accredited laboratory, to a written CE standard or Regulation. The laboratory issues a CE certificate for each product if it passes the criteria.

Different tests are performed for different products such as gloves, boots, limb protectors, back protectors, etc. Generally, mechanical tests and innocuousness tests are performed according to each CE standard. If the product only provides protection against the seasons, such as rain and wind, it does not need to be tested and certified.

Both the importer and the distributor are responsible for ensuring that the products brought into and placed on the market in the EU are tested and certified.

The people behind the Halvarssons brand are very experienced in developing products in this field and have been at the forefront of developing and testing protective gear for motorcyclists.

TODAY THERE ARE STANDARDS FOR THE FOLLOWING PRODUCT GROUPS:

- EN 1621-1 CE standard for impact protection (shoulders, elbows, hips and knees).
- EN 1621-2 CE standard for back protection.
- EN 1621-3 CE standard for chest protection.
- EN 1621-4 CE standard for inflatable protection.
- EN 13595 CE standard for motorcycle gloves.
- EN 13634 CE standard for motorcycle footwear.
- EN 14021 CE standard to protect riders against stones and debris (off-road motorcycling).
- EN 17092 CE standard for protective clothing for private individuals.

In some standards, the level of protection is stated. **Level 1** indicates the lowest level of protection, and **Level 2**, the highest level of protection.

Read more at halvarssonsmc.com

This product is pre-fitted with Velcro and can be complemented with a complete protection kit for pants. The CE-approved protectors come in two sizes.

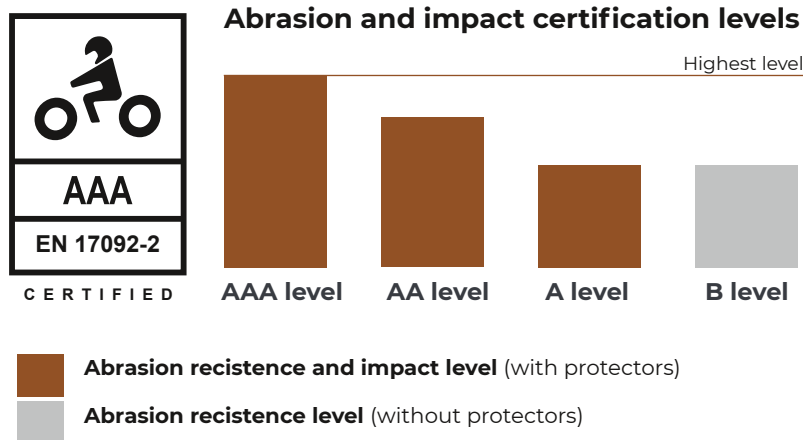

This product has armour that achieves Level 2, the highest level, according to EN 1621-1:2012. Velcro attachments for a personal fit. Jackets have shoulder and elbow armour. Pants have hip and knee armour. Elbow and knee armour are designed to provide more protection on the outside of the knee/elbow.

TECHNOLOGY

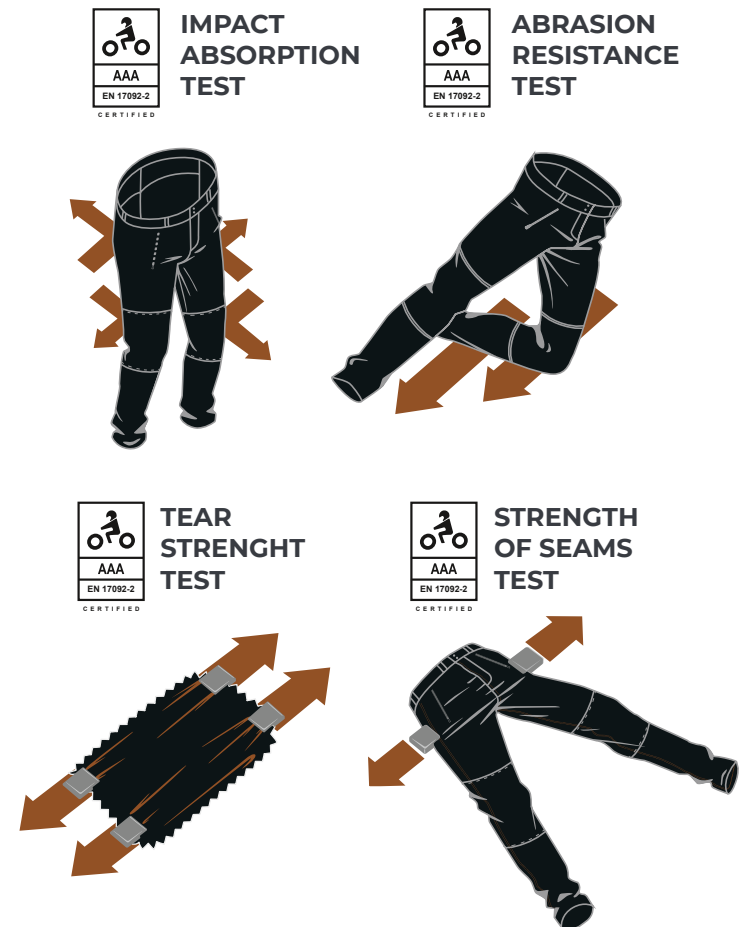

CE CERTIFIED PRODUCTS

There are days when things don't go to plan. Only during these times, you start to appreciate the reliability of your motorcycle gear. The EU has finally approved a new standard, EN 17092, *Protective clothes for motorcyclists*.

Abrasion tests are performed on the construction at three different **zones** (all layers together) of the garment, excluding the detachable linings. The demands vary in these different parts of the body. Shoulders, elbows, hips, and knees have higher demands than for instant inner thighs or underarms.

AAA is the highest performance level and then **AA** and **A**. The criteria for **B** are the same as for **A** but without impact protectors. Class C garments are designed to offer supplemental impact protection only. It is intended that Class C garments be worn in combination with Class AAA, AA, A or B garments to enhance the protection Class AAA, AA, AA or B garments offer. To meet a certain performance level for a product, the results of all mechanical tests must reach the criteria of this level.

PREMIUM ALL SEASON MEN

These garments are all water and windproof with excellent breathability thanks to our DRYWAY+ and DRYWAY+2.0 membranes. This includes removable, laminated, and drop-liner products. The Premium All-Season category also benefits from temperature-regulating OUTLAST material and the excellent heat restoration ability of the INNOBORNE and THINSULATE insulation. Developed by us, the HI-ART material, helps to ensure very high-level abrasion resistance in all garments in this category.

All our products are made of tested and selected materials and are official CE approved according to the standard covering each product group.

PREMIUM ALL SEASON WOMEN

Most styles are also made in a women's version. This means that they have all the same technical and safety features, it is only the design that is slightly different in order to accommodate the female body shape.

These garments are all water and windproof with excellent breathability thanks to our DRYWAY+ and DRYWAY+2.0 membranes. This includes removable, laminated, and drop-liner products. The Premium All-Season category also benefits from temperature-regulating

OUTLAST material and the excellent heat retention ability of INNOBORNE and THINSULATE insulation. Developed in house, our HI-ART material helps to ensure very high-level abrasion resistance in all garments in this category. All our products are made with specially selected materials and are tested in order to be officially CE approved according to the standard covering each product group.

CLASSIC LEATHER MEN

Our high-quality leather garments are all made from hides that are by-products of the meat industry. We carefully hand-select only the best hides from goat and cow to ensure our quality standards. The leather garments are all treated for design and quality reason. HI-ART helps to ensure a very high-level abrasion resistance in all garments.

All products are official CE certified to EN 17092 having both AAA and AA level of protection.

CLASSIC LEATHER WOMEN

The combination of great design and high-quality leather makes for top quality garments that not only fit the female body but give the right kind of protection as well.

We want you to be comfortable and therefore safe. All our leather garments are made from hides that are by-products of the meat industry. We carefully hand-select only the best hides from goat and cow to ensure our quality standards. The leather garments are all treated for both design and quality purposes. HI-ART helps to ensure a very high-level abrasion resistance in all garments.

All products are official CE certified to EN17092 having AA level of protection.

PREMIUM UNDERWEAR

UNISEX

Our high-quality base layer clothing keeps you warm and dry in any weather, regardless of the activity. Carefully selected materials have been developed for various uses to make outdoor activities comfortable all year round. The most important thing when choosing a base layer is to pay attention to the materials, as their properties differ considerably.

The base layer made of **100% Merino wool** is warm and light and brings warmth and comfort for winter activities. **Merino wool (61%)** and **Outlast® material (39%)** provides advanced thermal control for even the most challenging situations where body temperature fluctuations can be large. A comfortable **technical base layer** developed to transfer moisture from the skin very effectively. The layer keeps the skin dry and cool even in the toughest situations where sweating can be profuse.

PREMIUM GLOVES

Our gloves are made from the highest quality leather and most durable textiles, often in a combination giving you the benefit of the different materials. The gloves are divided into three separate sub-categories, All-season, Warm and Cool gloves. All-season stands for waterproof gloves with no or very little insulation. Warm means insulated waterproof gloves and Cool means non-waterproof summer gloves.

PREMIUM PROTECTORS

Safety through comfort has always been the most important part of our product development. The more comfortable the clothes feel the better the rider can focus on the essential - riding! The same applies for our protectors. When the protector is perfect for you, you don't feel it at all and you can fully focus on riding.

Our ergonomically formed protectors are very comfortable to use. They are made of light weight material and they are also pleasantly thin without compromising on safety. All jackets and pants include our certified level 2 (and level 1) limb protectors. All protectors have stepless adjustability that makes them the perfect fit for everyone! Complete your armour with one of our back protector options.

COTTON / PE

S-3XL

34 EUR / 349 SEK / 349 NOK / 29 GBP / 259 DKK

710-23130465, 710-23130497

H TEE WOMAN

T-shirt in cotton and polyester mix with logo print

COTTON / PE

XS-2XL

34 EUR / 349 SEK / 349 NOK / 29 GBP / 259 DKK

710-01240000
NECK COLLAR

High wind and waterproof neck collar

THERMO REFLECTIVE PE

Wind and waterproof in front /
Breathable and elastic in back

ONE SIZE

24,90 EUR / 249 SEK / 249 NOK /
24 GBP / 189 DKK

710-22131500
NECK WARMER

*Wind and waterproof neck collar with Velcro
adjustment*

HYDROBOLD PE ELASTANE / FLEECE LINING

Wind and waterproof and breathable neck collar /
Soft fleece lining / Velcro adjustment for perfect fit

BLACK ONE SIZE

19,90 EUR / 229 SEK / 229 NOK / 19 GBP / 159 DKK

710-23130700
BALACLAVA

*Moisture transporting balaclava in cotton and
polyester mix*

SIZE S-M/L-XL

19 EUR / 199 SEK / 199 NOK / 17 GBP / 149 DKK

710-22130900

BRACES

Braces for pants

**STRONG ELASTIC BAND
(38MM)**

Extra strong elastic braces with durable fastenings

BLACK ONE SIZE

24 EUR / 249 SEK / 249 NOK /
19 GBP / 189 DKK

710-22131100

WAIST ZIP V2

Adapter for connecting jeans to jacket

FAUX LEATHER

Zipper that is worn on a belt to connect trousers with jacket

SIZE MEN 80 CM / WOMEN 70 CM

19 EUR / 199 SEK / 199 NOK /
19 GBP / 149 DKK

710-22131200

BIB V2

Bib part to pants

330D PE TESLON

Adjustable braces / Large adjustable kidney belt fastening in front / Connects to pants with long connection zipper / Second connection zipper for connection to jacket

SIZE MEN 80 CM / WOMEN 70 CM

37 EUR / 399 SEK / 399 NOK / 34 GBP / 279 DKK

710-22131000, 710-22131030

LEATHER BELT

Leather belt

COW LEATHER

Leather belt with metal features

SIZE BLACK AND BROWN S = 94 CM / M = 109 CM / L = 124 CM

29 EUR / 299 SEK / 299 NOK / 25 GBP / 229 DKK

710-22131300

WAIST FLEX V2

Adaptor to extend between jacket and trousers connecting zips

HEAVY STRETCH KNIT

Extension between jacket and pants waist zip

SIZE MEN 80 CM / WOMEN 70 CM

22 EUR / 249 SEK / 249 NOK / 19 GBP / 169 DKK

Halvarssons

CLOTHES MADE FROM THE RIGHT STUFF

When we create new products, we set ourselves high standards.

Our secret recipe for success is a century of craftsmanship blended with high technology. The result is motorcycle gear that's far ahead of the pack. Just ask any of the professional motorcyclists who wear our garments daily. For instance, we have a great response from some of the police forces around Europe. In this section, you can read all about the techniques and methods we use to keep you safe and comfortable on the road.

We are almost obsessive in our desire to produce gear that is, as comfortable to wear as it is safe to ride in. It's why we spend so much time researching fabrics, developing new technologies and different construction methods. It's an ongoing pursuit. There's always a way to improve a garment and to improve biker's lives.

Hi-Art, for example, is a material that we developed as an abrasion-resistant backing material used in almost every product we produce. It can increase the strength of textile by up to 500% and leather by 200%. In addition to the in-house technologies, we use highly regarded materials and membranes like Dryway and Dryway+ to keep you dry and comfortable, Outlast linings to regulate temperature, Thinsulate to keep you warm and TFL Cool System to reflect heat when it's hot. Each of these technologies is rigorously tested and selected to suit our exact needs for the product we design. Outer materials are chosen for their strength and durability. The thread used in stitching is chosen for strength while the size of the stitch is carefully calculated to offer maximum strength.

The very best materials form only part of the equation. Just as important as the technology, is the comfort and fit of the garment. Quite simply, a rider who is relaxed and comfortable on the bike is a rider who can focus all his attention and energy on staying alert and safe. This is why the materials we use are not just effective in keeping you safe, but also soft and supple, chosen for their lightness and ease of use. It doesn't stop there. All of our fitted protectors are adjustable for a perfect individual fit with adjustable hems, cuffs and waist areas to further emphasise this.

Put on one of our products, and you will see what we mean. All of which increases the chances of you arriving home safe and relaxed.

HI-ART HI-ART is a proprietary material developed by us. We use the material in especially exposed areas to increase abrasion resistance. It makes leather 200 per cent stronger and textiles no less than 500 per cent stronger. We are extremely proud of our invention and of being alone in offering you this solution.

3STICH A garment is never stronger than its seams. It makes no difference how good the material is if the seams break. Following a multitude of tests, we have found a technique that provides maximum durability. We use a well-balanced stitch density, a heavy-duty, hard-wearing thread in triple stitched seams in exposed areas.

OUTLAST® Outlast® is a high-tech material that regulated the temperature inside the garment. It was originally developed to protect astronauts against extreme temperature changes and has since then been further developed to work in motorcycle wear as well. The lining consists of millions of microscopic paraffin wax capsules that absorb, store and release excess heat to keep you feeling comfortable out on the road. Read more at outlast.com

mcFIT Maximum Comfort FIT technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed.

SKIN FIT A technology used to secure glove linings. Where used the lining will remain firmly attached and not follow your hand when removed.

TEFLON® A Teflon treatment on a garment will keep water and dirt away. It also allows the garment to dry quicker. Read more at teflon.com

Dryway+2.0, Dryway+ and Dryway Dryway+2.0, Dryway+ and Dryway are wind and waterproof membranes that keep you dry even in the wettest, windiest weather. The material allows moisture vapour to escape from the inside while keeping wind and rain out. Our latest functional membrane, Dryway+2.0, has a waterproofing value of 10,000mm and a 30,000g/m²/24h breathability value. Keep in mind that a membrane function relies upon the difference in humidity between the inside and outside. If an external heat source is applied such as heated grips or seats, the membrane will work in reverse.

DWR An extra water repellent treatment, on some of our textile and leather products, provides additional comfort to the user. Garments treated with a DWR will shed water more efficiently, retain their breathability properties and dry faster while also being easier to keep clean.

TFL COOL SYSTEM

TFL Cool System®

Black leather can easily become hot in the sun. Therefore we use TFL Cool System – an innovation that ensures black leather to not absorb more heat, than lighter coloured materials. Once it has been treated, 80 per cent of the heat radiation is reflected away, and the garment can be up to 20 °C cooler.

INNOBORNE®

An insulating material capable of retaining heat longer than even wool yet is lightweight, quick-drying and transports moisture efficiently away from the body. Consist of 100% Olefin / Polypropylene.

THINSULATE®

Sometimes warm clothes can feel awkward and bulky, but thanks to Thinsulate, our garments are light and supple, while also keeping you warm. The secret behind the material is in the unique microfibres that helps trap body heat while allowing moisture to escape. Read more at thinsulate.com

NUDUD®

NUDUD is a new innovative high precision "touchscreen solution" that allows you to keep your gloves on in all situations, both on and off your motorcycle/snowmobile. The precision is second to none. Find more information at nudud.se

WINDWIRE®

WINDWIRE is a durable adjustment system that makes tightening and opening of garments and gloves very quick and easy. The dial system has been developed to give function and a perfect fit. Find more information at windwire.co.kr

The CE label shows that the product complies with an approved safety standard based on advanced testing and accident studies.

CARE INSTRUCTIONS

COMING IN FROM THE RAIN

Let wet garments dry slowly at room temperature. Leather garments should not be dried at too high a temperature and never in a drying cabinet or on a radiator as this will make garments stiff and hard.

LEATHER GARMENTS

Leather garments must never dry out completely. Because dry leather fibres break easily under stress such as an accident, treat leather regularly with, e.g. Nikwax Waterproof Wax for Leather so that it retains its natural elasticity. Use a mild soap solution or leather soap such as Nikwax Leather Cleaner, two or three times a year to ensure garments last year in, year out. Always test it first somewhere that doesn't show, e.g. inside.

TEXTILE GARMENTS

To keep textile garments clean, wash them according to their washing instructions; we recommend the use of Nikwax Tech Wash. But don't forget to remove the armour. It would be best if you waterproofed outer garments often, preferably every three washes. Use Nikwax TX Direct for functional clothing.

Halvarssons

WORKWEAR

vent.  SYSTEMS

PREMIUM FEATURES

STATIONARY GLOVE LININGS

MC FIT, SKINFIT and SKINFIT XTR technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed.

TOUCHSCREEN GLOVE

Innovative high precision "touchscreen solution" that allows you to keep your gloves on in all situations, both on and off your motorcycle/snowmobile. The precision is second to none.

ADJUSTMENT SYSTEM

WINDWIRE is a durable adjustment system that makes tightening and opening of garments and gloves very quick and easy. The dial system has been developed to give function and a perfect fit.

ARMOR READY

If a jacket bears this symbol it has a pocket in the lining, or an advance attaching system placed between the outer material and lining where you can adjust the position of your protector to your personal fitting.

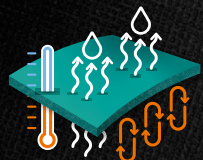

AIR BAG READY

If a jacket bears this symbol it has been developed to be combined with any stand alone airbag system. The jacket expands with the airbag in the unlikely event of an accident. When choosing the jacket size always consider the airbag supplier's advice.

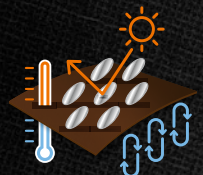

CHEST PROTECTOR READY

This jacket is equipped with a pocket for Halvarssons one-piece chest protector. Insert the protector into the protector pocket-sleeve. When closing the jacket, insert the sleeve-dressed protector into the protector garage, located on the other side of the front zipper.

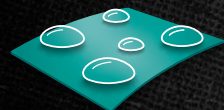

EFFECTIVE INSULATION

An insulating material capable of retaining heat longer than even wool yet is light weight, quick drying and transports moisture efficiently away from the body. Consist of 100% Olefin / Polypropylene.

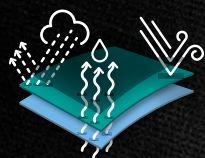

STAYS COOL

Black leather can easily become hot in the sun. Therefore we use TFL Cool System – an innovation that ensures black leather to not absorb more heat than lighter coloured materials. Once it has been treated, 80 per cent of the heat radiation is reflected away and the garment can be up to 20 °C cooler.

WATER REPELLENT

An extra water repellent treatment on some of our textile and leather products providing additional comfort to the user. Garments treated with a DWR will shed water more efficiently, retain their breathability properties and dry faster while also being easier to keep clean.

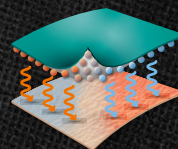

WIND, WATERPROOF & BREATHABLE

Dryway+2.0, Dryway+ and Dryway are wind and waterproof membranes that keep you dry even in the wettest, windiest weather. The material allows moisture vapour to escape from the inside while keeping wind and rain out. Our latest functional membrane, Dryway+2.0, has a waterproofing value of 10,000mm and a 30,000g/m²/24h breathability value. Keep in mind that a membrane function relies upon the difference in humidity between the inside and outside. If an external heat source is applied such as heated grips or seats, the membrane will work in reverse.

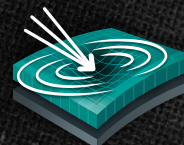

EFFECTIVE INSULATION

Sometimes warm clothes can feel awkward and bulky, but thanks to Thinsulate our garments are light and supple, while also keeping you warm. The secret behind the material is in the unique microfibrils that help trap body heat, while allowing moisture to escape.

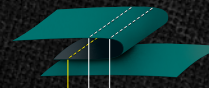

REGULATES TEMPERATURE

Outlast® is a high-tech material that regulates the temperature inside the garment. It was originally developed to protect astronauts against extreme temperature changes and has since then been further developed to work in motorcycle wear as well. The lining contains millions of microcapsules that absorb, store and release excess heat to keep you feeling comfortable out on the road.

SHOCK ABSORPTION

Our CE certified protectors are made of impact absorbing modified polyurethane. The combination of enhanced chemistry and product engineering provides high performance shock absorption and impact protection. Developed to fit our garments with Safety Attach System – S.A.S.

STRONGER SEAMS

A garment is never stronger than its seams. It makes no difference how good the material is if the seams break. Following a multitude of tests, we have found a technique that provides maximum durability. We use a well-balanced stitch density, a heavy-duty, hard-wearing thread in triple stitched seams in exposed areas.

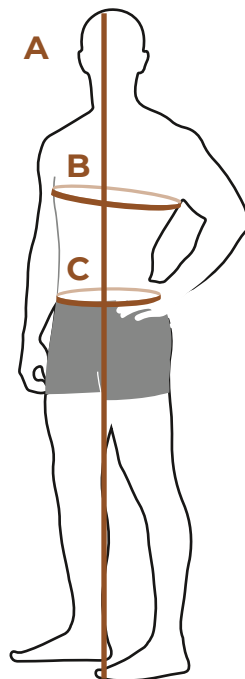

HIGH ABRASION RESISTANCE

HI-ART is a proprietary material developed by us. We use the material in especially exposed areas to increase abrasion resistance. It makes leather 200 per cent stronger and textiles no less than 500 per cent stronger. We are extremely proud of our invention and of being alone in offering you this solution.

SIZE AND FIT

Looking good and feeling comfortable on the road demands the right size clothes. What many forget is that a good fit is also important for safety. Because it's essential for protectors to be positioned correctly, we make adjustments possible by attaching protection with Velcro. Also, remember to try on the garments together with the clothes you usually wear when riding your MC. And don't be afraid to ask our personnel for help. The best way to find the right size is to visit one of our dealers. They'll help you find the right fit when you need new equipment.
