Established in Sweden 1891

lindstrandsmc.com

WHO WE ARE

Lindstrands, established in 1891, began making boots for motorcycle riders back in the 1950s. Still based in Malung, Sweden, Lindstrands has through the years evolved into a strong brand that is synonymous with safety, quality, sustainability and style. Our identity is all Swedish, but our focus is on the needs and demands of the global motorcycle market. After all, **when it works in Scandinavia...it works everywhere.**

Lindstrands makes clothes for those who like to stand out and live life to the full. With an extensive range of garments and accessories, never compromising on safety, Lindstrands epic ride continues with the focus on innovation and design with a Scandinavian touch.

We use innovative, state-of-the-art textiles and technologies along with a fresh open-minded design philosophy to give you, our motorcycle riders, the best possible solutions no matter the conditions.

Safety and comfort have always been the top priority for the research and development team throughout Lindstrands history. The better the garments feel, the better you can focus on your travel and the more you can enjoy your ride.

Lindstrands is the brand for you, who looks for something other than the mainstream. You, the young at heart who relishes adventure and dare to go the extra mile. For you, Lindstrands will not only meet but exceed every expectation.

SAFETY THROUGH COMFORT

SAFETY THROUGH COMFORT has been our “guiding light” throughout Lindstrands history. The more comfortable the garments are, the better you can concentrate on your adventure. We constantly develop ourselves as well as the materials and technical features in our garments to be able to offer the best possible solutions for our riders no matter the conditions. Lindstrands is the brand for people that relish adventure and who dare to go the extra mile. We want our riders to be, not only, comfortable and safe. We want them to forget they're wearing our gear and just enjoy the ride.

“The more comfortable the garments are, the better you can concentrate on your adventure.”

RIGHT MATERIALS

Outer materials are strong and durable, but also soft and supple to maximise safety and comfort. Each of our technologies is rigorously tested and selected to suit our products.

GREAT FITTING

We can honestly say that our clothes have probably the best fit on the market! Our goal is always to produce gear that is exceptionally comfortable to wear and equally safe to ride in.

ERGONOMICALLY FORMED SOFT PROTECTORS

Ergonomically formed protectors are very comfortable to use. They are made of light material and include air holes for ventilation that makes them breathable and comfortable.

BEST PROTECTOR ADJUSTABILITY

All our protectors have stepless adjustability that means everyone can find the perfect position for them. All protectors are compatible with all of our riding products.

HI-ART

HI-ART® is our proprietary material that makes garments resistant to abrasion and we use the material in especially exposed areas. It makes textiles no less than 500 % stronger and leather 200 % stronger.

LIGHT WEIGHT AND FLEXIBLE

Our goal is always to produce gear that is exceptionally comfortable to wear and equally safe to ride in so that you can always focus on what matters – riding!

Technology

CE CERTIFIED PRODUCTS

There are days when things don't go to plan. Only during these times, you start to appreciate the reliability of your motorcycle gear. The EU has finally approved a new standard, EN 17092, "Protective clothes for motorcyclists".

Motorcyclist personal protection comes under the legislation of the EU Regulation 2016/425. All products that are intended to protect the user from one or another hazard must be tested, by an accredited laboratory, to a written CE standard or Regulation. The laboratory issues a CE certificate for each product if it passes the criteria.

Different tests are performed for products such as gloves, boots, limb protectors, back protectors, etc. Generally, mechanical tests and innocuousness tests are performed according to each CE standard. If the product only protects against the seasons, such as rain and wind, it does not need to be tested and certified.

Abrasion and impact certification levels

-  **Abrasion resistance and impact level**
(with protectors)
-  **Abrasion resistance level**
(without protectors)

Highest level

Abrasion tests are performed on the construction at three different zones (all layers together) of the garment, excluding the detachable linings. The demands vary in these different parts of the body. Shoulders, elbows, hips, and knees have higher demands than for instant inner thighs or underarms.

AAA is the highest performance level and then AA and A. The criteria for B are the same as for A but without impact protectors. Class C garments are designed to offer supplemental impact protection only. It is intended that Class C garments be worn in combination with Class AAA, AA, A or B garments to enhance the protection Class AAA, AA, A or B garments offer. To meet a certain performance level for a product, the results of all mechanical tests must reach the criteria of this level.

TEAR STRENGTH TEST

STRENGTH OF SEAMS TEST

IMPACT ABSORPTION TEST

ABRASION RESISTANCE TEST

BENEATH THE SURFACE

SEAMS

We choose thread to suit the material to make seams as strong as possible. We use Triple Stitch in vulnerable areas of our leather wear.

HI-ART

Our proprietary material makes garments incredibly resistant to wear, and is used in most of our products. The picture above shows where HI-ART is located in our garments.

ARMOUR

Garments that use armour have Velcro sewn into them to keep the armour in place and for ease of adjustment.

AIR MESH

We often use Air Mesh behind armour for better comfort.

OUTER FABRIC

The outer fabric is leather or textile with various types of surface treatment.

MEMBRANE

Some garments have a laminated, drop-liner or removable membrane. Taped seams, naturally.

LINING

Closest to the body is a lining, sewn-in or removable. Usually made from ventilated mesh, temperature-regulating Outlast® or a warm, quilted lining.

All Weather Tech

Lomsen

Under the All Weather Technology umbrella, you can find our finest water and windproof garments with high breathability function (DRYWAY, DRYWAY+ and DRYWAY+ 2.0). The garments are made to withstand practically all kinds of riding weather. The range consists of abrasion-resistant materials and HI-ART, our exclusive reinforcement material. As insulation we use INNOBORNE and THINSULATE. All products are CE approved EN 17092 having AA or A level of protection.

Gloves

Motorcycle gloves are one of the essential pieces of equipment for rider to keep their hands warm and dry for the perfect grip in all conditions. Our gloves are developed for the most demanding riders and in our range you will find gloves for all conditions. Maximum control and comfort, advanced technologies and high quality manufacture guarantee a perfect riding experience.

The gloves are divided into **All Weather Tech**, **Warm Tech** and **Cool Tech**. The perfect fit ensures the perfect comfort! Our MC-Fit and Skin Fit technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed. Many of our gloves are also equipped with innovative a high precision touchscreen solution.

BRANDED MATERIAL EXPLANATION

We are almost obsessive in our desire to produce gear that is, as comfortable to wear as it is safe to ride in. It's why we spend so much time researching fabrics, developing new technologies and different construction methods. It's an ongoing pursuit. There's always a way to improve a garment and to improve biker's lives.

"Put on one of our products, and you will see what we mean. All of which increases the chances of you arriving home safe and relaxed."

HiArt, for example, is a material that we developed as an abrasion-resistant backing material used in almost every product we produce. It can increase the strength of textile by up to 500% and leather by 200%. In addition to the in-house technologies, we use highly regarded materials and membranes like Dryway and Dryway+ to keep you dry and comfortable, Outlast linings to regulate temperature, Thinsulate to keep you warm and TFL to reflect heat when it's hot. Each of these technologies is rigorously tested and selected to suit our exact needs for the product we design. Outer materials are chosen for their strength and durability. The thread used in stitching is chosen for strength while the size of the stitch is carefully calculated to offer maximum strength.

The very best materials form only part of the equation. Just as important as the technology, is the comfort and fit of the garment. Quite simply, a rider who is relaxed and comfortable on the bike is a rider who can focus all his attention and energy on staying alert and safe. This is why the materials we use are not just effective in keeping you safe, but also soft and supple, chosen for their lightness and ease of use. It doesn't stop there. All of our fitted protectors are adjustable for a perfect individual fit with adjustable hems, cuffs and waist areas to further emphasise this.

If a jacket bears this symbol, it has a pocket in the lining, or an advance attaching system placed between the outer material and lining where you can adjust the position to fit you.

The product has CE-approved protection level 1 and Velcro fasteners for easy adjustment. Jackets have shoulder and elbow armour. Pants have hip and knee armour.

This product has armour that achieves Level 2, the highest level, according to EN 1621-1:2012. Velcro attachments for a personal fit. Jackets have shoulder and elbow armour. Pants have hip and knee armour. Elbow and knee armour are designed to provide more protection on the outside of the knee/elbow.

CLOTHES MADE FROM THE RIGHT STUFF

When we create new products, we set ourselves high standards. Our secret recipe for success is a century of craftsmanship blended with high technology. The result is motorcycle gear that's far ahead of the pack. Just ask any of the professional motorcyclists who wear our garments daily. For instance, we have a great response from some of the police forces around Europe. In this section, you can read all about the techniques and methods we use to keep you safe and comfortable on the road.

HI-ART

HI-ART HI-ART is a proprietary material developed by us. We use the material in especially exposed areas to increase abrasion resistance. It makes leather 200 per cent stronger and textiles no less than 500 per cent stronger. We are extremely proud of our invention and of being alone in offering you this solution.

mcFIT

mcFIT Maximum Comfort FIT technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed.

SKIN FIT

SKIN FIT A technology used to secure glove linings and membranes. Where used the lining and membrane will remain firmly attached and not follow your hand when removed.

TEFLON® A Teflon treatment on a garment will keep water and dirt away. It also allows the garment to dry quicker. *Read more at teflon.com*

DRYWAY+2.0 DRYWAY+ PLUS DRYWAY

Dryway+2.0, Dryway+ and Dryway

Dryway+2.0, Dryway+ and Dryway are wind and waterproof membranes that keep you dry even in the wettest, windiest weather. The material allows moisture vapour to escape from the inside while keeping wind and rain out. Our latest functional membrane, Dryway+2.0, has a waterproofing value of 10,000mm and a 30,000g/m²/24h breathability value. Keep in mind that a membrane function relies upon the difference in humidity between the inside and outside. If an external heat source is applied such as heated grips or seats, the membrane will work in reverse.

DWR An extra water repellent treatment on some of our textile and leather products providing additional comfort to the user. Garments treated with a DWR will shed water more efficiently, retain their breathability properties and dry faster while also being easier to keep clean.

INNOBORNE

INNOBORNE® An insulating material capable of retaining heat longer than even wool yet is lightweight, quick-drying and transports moisture efficiently away from the body. Consist of 100% Olefin / Polypropylene.

Thinsulate

THINSULATE® Sometimes warm clothes can feel awkward and bulky, but thanks to Thinsulate our garments are light and supple, while also keeping you warm. The secret behind the material is in the unique microfibres that helps trap body heat while allowing moisture to escape. *Read more at thinsulate.com*

NUDUD®

NUDUD is a new innovative high precision "touch-screen solution" that allows you to keep your gloves on in all situations, both on and off your motorcycle/snowmobile. The precision is second to none. Find more information at nudud.se

SuperFabric®

SUPERFABRIC® technology starts with a fabric and overlays it with tiny plates ("guard plates") in a specific arrangement. The gaps between guard plates allow complete flexibility. The geometry, thickness, and size of the guard plates, as well as the fabric, can be varied depending on the desired attributes. SuperFabric® materials are designed to deliver a range of performance features such as abrasion resistance, stain resistance, quick drying, weight reduction and more.

CE The CE label shows that the product complies with an approved safety standard based on advanced testing and accident studies.

FEATURES

WIND, WATERPROOF & BREATHABLE

Dryway+2.0, Dryway+ and Dryway are wind and waterproof membranes that keep you dry even in the wettest, windiest weather. The material allows moisture vapour to escape from the inside while keeping wind and rain out. Our latest functional membrane, Dryway+2.0, has a waterproofing value of 10,000mm and a 30,000g/m²/24h breathability value. Keep in mind that a membrane function relies upon the difference in humidity between the inside and outside. If an external heat source is applied such as heated grips or seats, the membrane will work in reverse.

WATER REPELLENT

An extra water repellent treatment on some of our textile and leather products providing additional comfort to the user. Garments treated with a DWR will shed water more efficiently, retain their breathability properties and dry faster while also being easier to keep clean.

EFFECTIVE INSULATION

An insulating material capable of retaining heat longer than even wool yet is light weight, quick drying and transports moisture efficiently away from the body. Consist of 100% Olefin / Polypropylene.

STAYS COOL

Black leather can easily become hot in the sun. Therefore we use TFL Cool System – an innovation that ensures black leather to not absorb more heat than lighter coloured materials. Once it has been treated, 80 per cent of the heat radiation is reflected away and the garment can be up to 20 °C cooler.

HIGH ABRASION RESISTANCE

SuperFabric® technology starts with a fabric and overlays it with tiny plates ("guard plates") in a specific arrangement. The gaps between guard plates allow complete flexibility. The geometry, thickness, and size of the guard plates, as well as the fabric, can be varied depending on the desired attributes. SuperFabric® materials are designed to deliver a range of performance features such as abrasion resistance, stain resistance, quick drying, weight reduction and more. The plates may cause scratches to the paint of your vehicle.

EFFECTIVE INSULATION

Sometimes warm clothes can feel awkward and bulky, but thanks to Thinsulate our garments are light and supple, while also keeping you warm. The secret behind the material is in the unique microfibrils that help trap body heat, while allowing moisture to escape.

REGULATES TEMPERATURE

Outlast® is a high-tech material that regulates the temperature inside the garment. It was originally developed to protect astronauts against extreme temperature changes and has since then been further developed to work in motorcycle wear as well. The lining contains millions of microcapsules that absorb, store and release excess heat to keep you feeling comfortable out on the road.

SHOCK ABSORPTION

Our CE certified protectors are made of impact absorbing modified polyurethane. The combination of enhanced chemistry and product engineering provides high performance shock absorption and impact protection. Developed to fit our garments with Safety Attach System – S.A.S.

STRONGER SEAMS

A garment is never stronger than its seams. It makes no difference how good the material is if the seams break. Following a multitude of tests, we have found a technique that provides maximum durability. We use a well-balanced stitch density, a heavy-duty, hard-wearing thread in triple stitched seams in exposed areas.

HIGH ABRASION RESISTANCE

HI-ART is a proprietary material developed by us. We use the material in especially exposed areas to increase abrasion resistance. It makes leather 200 per cent stronger and textiles no less than 500 per cent stronger. We are extremely proud of our invention and of being alone in offering you this solution.

STATIONARY GLOVE LININGS

Maximum Comfort FIT and SKINFIT technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed.

TOUCHSCREEN GLOVE

Innovative high precision "touchscreen solution" that allows you to keep your gloves on in all situations, both on and off your motorcycle/snowmobile. The precision is second to none.

AIR BAG READY

If a jacket bears this symbol it has been developed to be combined with any stand alone air-bag system. The jacket expands with the airbag in the unlikely event of an accident. When choosing the jacket size always consider the airbag supplier's advice.

CHEST PROTECTOR READY

This jacket is equipped with a pocket for Halvarsons one-piece chest protector. Insert the protector into the protector pocket-sleeve. When closing the jacket, insert the sleeve-dressed protector into the protector garage, located on the other side of the front zipper.

ARMOR READY

If a jacket bears this symbol it has a pocket in the lining, or an advance attaching system placed between the outer material and lining where you can adjust the position of your protector to your personal fitting.

CARE INSTRUCTIONS

When you come in from the rain – Let wet garments dry slowly at room temperature. Leather garments should not be dried at too high a temperature and never in a drying cabinet or on a radiator as this will make garments stiff and hard. Leather garments – Leather garments must never dry out completely. Because dry leather fibres break easily under stress such as an accident, treat leather regularly with, e.g. Nikwax Waterproof Wax for Leather so that it retains its natural elasticity. Use a mild soap solution or leather soap such as Nikwax Leather Cleaner two or three times a year to ensure garments last year in, year out. Always test it first somewhere that doesn't show, e.g. inside. Textile garments – To keep textile garments clean, wash them according to their washing instructions; we recommend the use of Nikwax Tech Wash. But don't forget to remove the armour. It would be best if you waterproofed outer garments often, preferably every three washes. Use Nikwax TX Direct for functional clothing.

SIZE and FIT

Looking good and feeling comfortable on the road demands the right size clothes. What many forget is that a good fit is also important for safety. Because protectors need to be positioned correctly, we make adjustments possible by attaching protection with Velcro. Also, remember to try on the garments together with the clothes you usually wear when riding your MC. And don't be afraid to ask our personnel for help. The best way to find the right size is to visit one of our dealers. They'll help you find the right fit when you need new equipment.
